SWISS MADE

BLADES

Metacod is Switzerland's leading supplier of technology in the field of cutting blades and perforating tools used in the production of plastic and aluminium closures.

- 1** We use only high-alloy-content, isotropic, non-textured materials.
- 2** We employ a thoroughly tried-and-tested heat-treatment technique to produce a superfine martensitic structure with high resistance to fracture. This rules out the possibility of tools being chipped.
- 3** The use of carefully-selected, highly-customised finishes reduces adhesive wear, while keeping under control the dynamic loads that act on the tool.

These factors, combined with our know-how in the production of high-precision cutting blades, deliver a long service life, outstanding quality and consistent tear-off resistance for your closures.

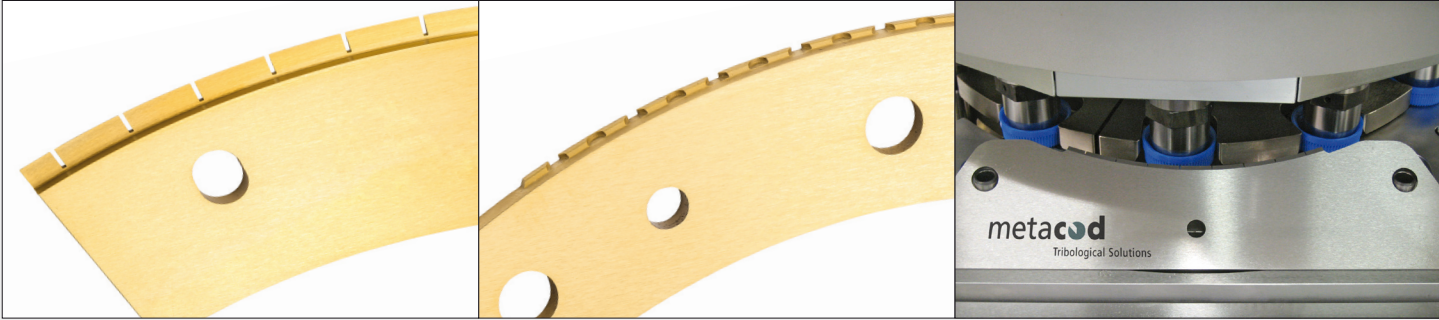

We are highly specialised in this field, and can produce your cutting blades in as little as two weeks.

Rolling and shaping tools

Our tools let you set new benchmarks when it comes to supplying your customers with quality and dimensional accuracy. Our materials are exceptionally hard-wearing.

We manufacture no fewer than 7000 cutting, perforating, rolling and shaping tools in our production plant every year, for export to 25 countries around the world.

” Plant systems supplied by PackSys Global and installed worldwide produce millions of plastic closures every day, using Duraslit® blades for better consumer-protection.

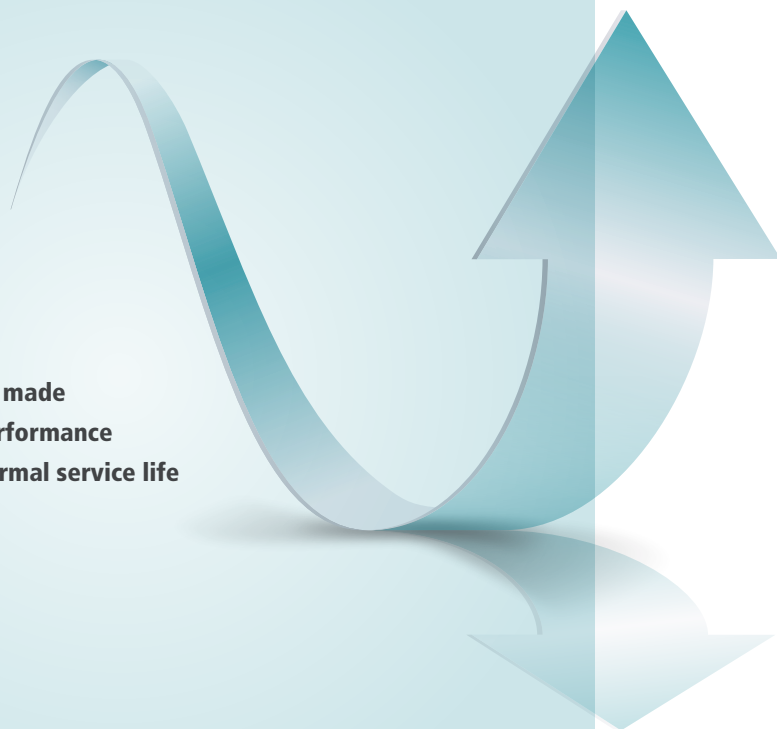

Quality, flexibility and support for further joint developments have characterised the partnership for many years. This is likewise confirmed by high levels of customer satisfaction. ”

Dr. Manfred Zurkirch, CEO of PackSys Global AG

” We achieve very good service-life performance with Metacod products, and a considerable increase in the quality of our aluminium closures. ”

Vladimir Zarankin, Technical Director at TOKK Russia

Our cutting blades, which are made of carefully-selected, high-performance materials, let you multiply normal service life by a factor of 2 to 4.

Metacod in use around the world

Who we are – our corporate image

We can count on twenty years' experience as reliable suppliers to renowned manufacturers of machines and closure systems. Our manufacturing experience and core competence in the field of metallurgy guarantee you a real competitive advantage.
